

Basic Care and Operation

1. Panels should only be operated when the handles are in the up position.
2. During installation be sure that the unit is sealed properly to the building and at all jamb corners. Be sure to allow for proper drainage.
3. Most units will need some adjustment by your installer after construction is complete.
4. These products are produced to precise tolerances. It is critical that operation is not forced.
5. Clean tracks, hardware and gaskets at a minimum of every 6 months to increase performance and longevity of the unit.
6. Units should be cleaned with water and mild detergent only. Use of other substances that result in damage to the finish will void the warranty.
7. When operating folding door systems keep hands away from hinge areas to prevent injury.
8. Products produced by Premier Folding Doors are supplied with a limited manufacturer warranty which covers parts & materials for 10 years and 2 years on limited service.
9. All protective film or plastic wrap or stickers **MUST** be removed within 48 hours of installation. If not removed, the finish will be damaged and warranty will be void.
